

Jonathan Vicesar

Software Developer · Computer Engineering Student

jonathanrafaelvicesar@gmail.com · Paraguay · jonavicesar.pages.dev · github.com/JonaVicesar · linkedin.com/in/jonathanvicesar

PROFESSIONAL SUMMARY

Self-taught software developer with production systems for real businesses. By age 21 I had shipped complete solutions — frontend, database, and admin panels — for clients in Argentina and Paraguay, specializing in digital catalogs, order systems, and admin panels for small businesses. I also build open-source tools and libraries published on npm and PyPI. I use Fedora Linux as my daily driver (with experience across several other distros), with a self-built ecosystem of shell scripts and a strong interest in low-level systems. Computer Engineering student focused on building useful, maintainable software.

TECHNICAL SKILLS

Frontend	React JavaScript (ES6+) HTML5 CSS3 Tailwind Bootstrap Astro Vite
Backend	Node.js Express Python FastAPI Java .NET
Databases	Supabase PostgreSQL MySQL
Tools	Git GitHub GitHub Actions Linux OpenCode Figma Vercel Cloudflare npm PyPI

FEATURED PROJECTS

HashtagCelu — Digital Catalog with Admin Panel	Argentina · 2026
Stack: React, Supabase, JavaScript, CSS · catalogo-hashtagcelu.pages.dev	
- Designed and built the full admin panel from scratch, letting the business manage orders and print tickets without manually tracking WhatsApp messages. - Implemented real-time sync with Supabase so incoming orders appear instantly on the dashboard with no manual refresh needed.	
Florería Ornella — Catalog with Order System	Paraguay · 2025
Stack: React, JavaScript, CSS · ornella.pages.dev	
- Built a shopping cart with automatic delivery-cost calculation by zone, removing the manual back-and-forth over WhatsApp to quote shipping. - Mobile-first design with a fast, lightweight interface.	
Inventory Management System — Web App with Admin Panel	Paraguay · 2025
Stack: React, Supabase, JavaScript, CSS	
Full web app for stock control, products, and categories, with an admin panel, secure authentication, and a real-time database.	
RgTraslados — Company Website	Argentina · 2024
Stack: Astro, JavaScript, CSS · rgtraslados.com	
Complete website for a transport company, built entirely with Astro and optimized for speed and conversion.	
FIUNI Correlativas — Alternative University Platform + Custom API	Paraguay · 2025
Stack: React, Python, FastAPI, Supabase, PostgreSQL, Render	
- Alternative web platform for the university system — prerequisite (correlativas) visualization, curriculum maps, and attendance tracking — with better UX and extra features, used by students in the program. - Designed and built a custom backend server (Python + FastAPI) acting as proxy/backend: resolves the official API's CORS restrictions and handles automatic JWT token refresh. - Reverse-engineered the university's official platform (no public documentation) via network traffic analysis, and migrated storage to a relational Supabase schema, resolving mismatches between subject codes in the API and the official curriculum.	

PERSONAL / OPEN SOURCE PROJECTS

cmdfinder — Terminal Command Search CLI	2025–2026
Stack: Python, Textual · github.com/JonaVicesar/cmdfinder	
- Command-line tool (cf) for fuzzy-searching terminal commands through a TUI built with Textual, with a modular, XDG-compliant architecture. - Remote, GitHub-backed command catalog, CI with GitHub Actions, and published to PyPI (pip install) under the MIT license.	
QuickSearchPopup — Fast Search Extension for Firefox	2026
Stack: JavaScript, WebExtensions API · github.com/JonaVicesar/quick-search-popup	
Browser extension for searching Google from any tab via a keyboard shortcut: a lightweight popup that opens with the shortcut and closes with Esc, with no context switch or new tab needed.	
SheetsBase — Open Source npm Library	2025–2026
Stack: Node.js, JavaScript, Google Sheets API · github.com/JonaVicesar/sheetsbase	
- Query client for Google Sheets with a Supabase-style API (.select(), .eq(), .order()...) and an internal caching layer that cuts response time up to 160x. - Published on npm as @sheetsbase/client. Runs directly in Node.js, no separate server needed.	
Spoti Lyrics — Lyric Card Generator	2026
Stack: React, Vite, HTML5 Canvas API, iTunes Search API · spoti-lyrics.vercel.app	
Automatic lyric search by song (manual input as fallback), with a fully customizable card exported as a high-res PNG (6x), no backend.	

ACHIEVEMENTS

NASA Space Apps Challenge — 3rd Place (Local)	2025
International NASA hackathon: built a pixel art space-station management game, learning C# and Unity from scratch during the competition.	

EDUCATION

B.Eng. Computer Engineering
In progress (2024 – present) · Universidad Nacional de Itapúa, Paraguay
Graphic Design with CorelDraw
Certificate (2023) · SNPP, Paraguay
